

CSEB5123 Advanced Web Application Development
LAB TEST

Student ID: SW01083718 Name: Pavala Rani Sunderan Section: 01TB Signature: 

Preamble:

You are to create a Laravel application that will allow user to manage records of Product and Supplier. A Product is supplied by a single supplier. A supplier supplied many products. The system shall allow user to:

- a. List down all the records in database.
- b. Select a specific record to view details
- c. Update a specific record.
- d. Create or add a new record
- e. Delete a specific record.

You are to follow the instruction given below. All screenshots need to be pasted in Word Document, and later shall be exported to a PDF.

No.	Description	Screenshot for submission	Checked/Remarks
1.	Set up a new Laravel application. Use your Student ID as your project name.	Project directory structure	
2.	Create the appropriate database and link the database with your application. Make sure you can perform migration without errors.	Artisan command output	
3.	Create a model Product together with resource controller & migration file. Product attributes: name(string), barcode(string), supplier_id(foreign). Update <i>web.php</i> with appropriate route	1. Artisan command output (create model, controller and migration file) 2. output of artisan command route:list	
4.	Create a migration file for products table and perform migration.	1. Content of the respective migration file 2. Output of artisan migration command	
5.	Create a model Supplier together with resource controller & migration file. Product attributes: name(string), address(string), contactNo(string). Update <i>web.php</i> with appropriate route	1. Artisan command output (create model) 2. output of artisan command route:list	
6.	i. Create a migration file for products table. ii. Perform the migration	1. Content of the respective migration file 2. Output of artisan migration command	
7.	Create relationship for both Product & Supplier: i. Supplier supplies many products ii. Product belongs to one Supplier	1. Relationship function in both models.	
8.	In ProductController and SupplierController , complete all the CRUD methods accordingly i.e. index(), create(), store(), show(), edit(), update(), destroy()	1. CRUD methods in ProductController 2. CRUD methods in SupplierController	

9.	Views file: i. In the default welcome.blade.php, show links to Product and Supplier index . ii. Create views for: - List all products & supplier - Create new product&supplier - Edit a product&supplier iii. For Product show, show the product's supplier. iv. For Supplier show, show the supplier and its products.	1. Application main page with links to Product & Supplier 2. Product views: a. list all products b. create new product c. edit product d. show product with its supplier 3. Supplier views: a. list all suppliers b. create new supplier c. edit supplier d. show supplier's products	
10.	Declaration Codes generated by Gen AI: <u>25</u>%		

Submission:

1. Screenshot your answer, paste it in Word document.
2. Make sure the screenshot it is readable.
3. Clearly indicate each answer with question number (i.e. q1, q2, q3 etc.)
4. Save your PDF using this convention: <student_id>_<section>.pdf. E.g.: **SW0101234_1A.pdf**
5. Upload to the designated submission link in Brighten:
 - a. This question paper (with name, Student ID & signature)
 - b. Screen screenshots in PDF
